## IISRP PUBLISHES EPDM Market Report Entitled "A Promising Future for Chinese EPDM Market" *Joint Work from IISRP and CNCIC*

**HOUSTON, TEXAS, 27 Oct 2009** —The International Institute of Synthetic Rubber Producers (IISRP) has published the Ethylene Propylene Rubber (EPR, also known as EPDM) market report. It is the first report of a series of a new publication, the "Elastomer Bulletin", jointly developed by IISRP and CNCIC (China National Chemical Information Center), the leading chemical information center in China. This report focuses on the emerging EPDM Chinese market, with background information about global EPDM producers and capacities. The nine-page report also contains the IISRP's supplemented forecast data of supply and demand for the global and Asian market, according to Dr. Leon Loh, IISRP's General Director of Programs.

The Chinese EPDM market information includes supply/demand, market segmentation and import/export data. It is predicted that by the end of 2010, China's production capacity of EPR will reach at least 50,000 t/a. However, more than 100,000 t/a of the supply shortage gap after 2010 is still expected, providing a promising business opportunity for the Chinese market.

This report is a PDF file and is available at the IISRP's website: <http://iisrp.com/publications.html>
